

BUTLER PARK ATHLETIC COMPLEX MASTER PLAN

📍 North Port, Florida

PROJECT OVERVIEW

The Butler Park Master Plan involved a conceptual design and evaluation of the existing 820,670 sq.ft. to replace the ball fields, amenities, and batting cages. Fawley Bryant Architecture designed a roadmap for the creation of a very unique athletic complex. The concept of creating a strong sense of place and arrival is reinforced in the design concept by the iconic entry portal established with the event promenade, which establishes an inviting “front door” to the Butler Park Athletic Complex. The strongest attribute of the master plan is the overall organization, with the main entrance buildings logically serving as the hub, access via a formal pedestrian pathway from the main parking lot and closely surrounded by all of the event venues.
